Projects

- viparaa Homes**
It's a real time project that uses HTML, CSS, JavaScript, Bootstrap, and Laravel to create a modern website for a construction company, making it easy to use and engaging for visitors.
- Task Master**
Is a web application project that utilizes Python and Django to craft a user-friendly task management platform. Backend functionality is powered by SQL, while Python is used for task scripting. The frontend interface is developed using HTML, CSS, JavaScript, and Bootstrap to ensure a modern and responsive user experience.
- I Phone Price and Rating Analysis**
Is a web app offering insights into iPhone prices and ratings. It employs HTML/CSS/JS for frontend, Python for backend data handling, and Power BI for interactive data visualization.
- Leave Management System (LMS)**
It's a MEAN stack web app facilitating efficient management of employee leave requests and approvals, with MongoDB, Express.js, AngularJS, and Node.js powering the backend, while the frontend employs HTML, CSS, JavaScript, and Bootstrap for a user-friendly interface.
